When Human Life Begins

American College of Pediatricians – March 2017

ABSTRACT: The predominance of human biological research confirms that human life begins at conception—fertilization. At fertilization, the human being emerges as a whole, genetically distinct, individuated zygotic living human organism, a member of the species *Homo sapiens*, needing only the proper environment in order to grow and develop. The difference between the individual in its adult stage and in its zygotic stage is one of form, not nature. This statement focuses on the scientific evidence of when an individual human life begins.

A very pro life message

Here we have both a Fetus and a Zygote validating each other. The Fetus, John, recognizes the presence of the Zygote, Jesus, and leaps for joy in Elizabeth's womb. Only a person can leap for joy. And if John the Fetus is able to recognize that Zygote, Jesus, that tells me the Zygote is Jesus, That Zygote is a person. John and Jesus validate each other as a person.
